A Current Awareness Journal

FINAL ISSUE

The Office of Scientific and Technical Information

The Department of Energy's Scientific and Technical Information Program (STIP) is carried out at many levels within the Department and by its contractor organizations. The Office of Scientific and Technical Information (OSTI) in Oak Ridge, Tennessee, provides direction and leadership for STIP and serves as DOE's national center for scientific and technical information management and dissemination. Both DOE-originated information and worldwide literature regarding advances in subjects of interest to DOE researchers are collected, processed, and disseminated through the Energy Data Information System (EDIS) maintained by OSTI. The

major data bases in the United States through to those outside the international exchange and for the major data bases are available through OSTI's International Technology Information System (ITIS). To manage effectively, DOE's Scientific and Technical Information Program is one of our new information products.

Energy Abstracts for Policy

Energy Abstracts for Policy Analysis (EAPA), while embracing all phases of energy analysis and development, is limited primarily to nontechnological or quasitechnological articles or reports having significant reference value. This selectivity in scope and coverage of EAPA is effected to emphasize the following: programmatic efforts; policy, legislative, and regulatory aspects; social, economic, and environmental impacts; regional and sectoral analyses, institutional factors, etc. Note: the "hard" scientific and technical literature is abstracted for the most part in DOE Energy Research Abstracts (ERA) and is included in the DOE Energy Data Base.

Selection for EAPA is based strictly on content (substantive articles) and is made from Congressional committee prints; Federal agency and department reports; regional commission and state and local government reports; periodicals, including trade journals and newsweeklies; conference proceedings and/or conference papers;

books, including etc.; and documents and foundations, etc.

EAPA is available from the Superintendent of Documents Printing Office. The subscription rate is \$87.50 for subscribers in the United States and possessions (domestic) or \$125.00 for subscribers in all other countries (foreign).

How To Use the Indexes

Four indexes are provided for approaching the content of each issue of *Energy Abstracts for Policy Analysis*. Descriptions of entries in these indexes follow.

Corporate Author Index

The corporation, organization, or institution responsible for the issuance of the document is listed in this index. The entries are arranged alphabetically and provide the title and citation number of the reference. For example, the listing for the "Report" sample citation would appear as shown at right.

Personal Author Index

Each author's name listed on a document cited in this issue is indexed. An index entry provides title and citation number; for secondary and other names, a cross-reference is given to the primary author name where the full index entry is located.

Subject Index

This index lists the main subject descriptors assigned to each record by indexing professionals. A secondary or qualifier term is used where necessary to describe materials, objects, and processes. Document titles may be enhanced with additional informative phrases where necessary. An excerpt from this index appears at right.

Report Number Index

Technical report literature is indexed by the alphanumeric identifier of the report. Patent documents and inferences are included for convenience. Each entry lists the citation number, the source of availability of the document, an indicator of presence at a GPO depository library, order number, and distribution category. A typical entry is:

CORPORATE AUTHOR INDEX	1
PERSONAL AUTHOR INDEX	26
SUBJECT INDEX	70
REPORT NUMBER INDEX	209
ORDER NUMBER CORRELATION	252

This index lists the corporate authors responsible for issuing the documents in this publication which are identified primarily by report number. The corporate names are entered in standardized forms as defined in *DOE Energy Data Base: Corporate Author Entries* (DOE/TIC-4585). Each entry under a corporate name includes the document title and citation number. Three items of information may appear in parentheses: (1) an abbreviation to identify the document type, such as a report; (2) the country of publication, also abbreviated; and (3) the language of the document if non-English (R;US; French). Author affiliations are not listed in this index.

Personal Author Index

Authors' surnames are indexed in the form appearing in the publication cited; given names generally have been reduced to initials. For documents with multiple authors, each author name is indexed. The entry for a primary author (first author listed on an abstracted document) includes the full document title and citation number. Entries for other authors provide a cross-reference to the primary author. Also included is information on the document type, country of publication, and the document language listed in parentheses in the format (J;FR;In French and English). Accent marks are not input because of computer alphabetization. Spelling and transliteration follow standard conventions.

Subject Index

This index is arranged by subject descriptors selected from those assigned to each citation in this publication. Subject descriptors are selected from a controlled thesaurus of terms, *EDB Subject Thesaurus* (DOE/OSTI-7000). In order to enhance indexing, subject descriptor entries generally consist of a pair of descriptors: a main term and a qualifier term. Each entry includes the full title (which may be followed by supplementary descriptive information in parentheses) and the citation number. Additional information given in parentheses indicates the document type (an abbreviation such as B for book), the country of publication (such as DE for Federal Republic of Germany), and the language if non-English.

See references guide users from synonymous terms to the descriptors selected for the concept. See also references indicate subject concepts that are more specific than a particular descriptor. To gain complete subject coverage, all such terms should be reviewed.

Report Number Index

The report number index consists of the alphanumeric identifiers assigned to report literature as well as patent and conference literature cited in this publication. Entries provide the abstract number; the source(s) of availability of the document; the GPO file prefix for GPO depository library documents; the order number for OSTI and NTIS report ordering purposes; and, if the document was distributed under the DOE distribution program, the category number is shown for paper copy (PC), microfiche (MF), or no distribution (ND). These categories are included to assist DOE librarians in responding to requests for reports in their collections. The index also lists secondary numbers, with the corresponding abstract numbers and cross-references to other identifying numbers.

Codes Used on Index Lines

Following the citation numbers in the Corporate Author, Personal Author, and Subject Indexes, codes are used to designate the type of document, country of publication, and language of the document, e.g., (R;SU;In Russian). The language designator does not appear if the document is published in English.

ENERGY RESEARCH ABSTRACTS (ERA)

ENERGY RESEARCH ABSTRACTS (ERA), a semimonthly publication, provides its readers a central source through which they can obtain a record of research and development sponsored by the Department of Energy. The publication has a comprehensive scope that encompasses the Department's research, development demonstration, and technological programs addressing energy sources, supplies, safety, environmental impacts, and regulation.

ENERGY RESEARCH ABSTRACTS (ERA) is available by annual subscription to DOE and its contractors for \$100.00 for 24 issues, \$100.00 for the cumulative indexes, or \$150.00 for both. Contact the Office of Scientific and Technical Information, P.O. Box 62, Oak Ridge, Tennessee 37831.

ERA is available to the public from the Superintendent of Documents, U.S. Government Printing Office, Washington, D.C. 20402, for the subscription rate of \$184.00 (\$230.00 for foreign subscribers). A single issue of ERA costs \$27.00 (domestic) or \$33.75 (foreign).

Federal Depository Library Program

As a result of an agreement between the U.S. Government Printing Office (GPO) and the Department of Energy, beginning in 1984 DOE reports with unlimited distribution are now included in the Federal Depository Library Program. The Regional Depository Libraries listed below receive and retain at least one copy of nearly every Federal Government publication, either in printed or microform form, for use by the general public. These libraries provide reference services and interlibrary loans; however, they are not sales outlets. You may wish to ask your local library to contact a Regional Depository to help you locate specific publications, or you may contact the Regional Depository yourself. Do not send checks or orders to these libraries.
